

Scope of Work

Autonomous Forklift Operations at South Coast Wallisville

1. Service Overview

Hive shall deliver a Supervised Autonomy Service ("Service") for the Customer's forklifts at South Coast. The Service consists of Hardware, Software and Human-in-the-Loop supervision that enables the machines to perform defined internal logistics and pallet-handling tasks, including repetitive transport cycles for pallet handling, within agreed operational areas.

3. Validation Period: Tasks & KPIs

3.1 Operational Tasks:

1. Defined Transportation routes, among them:
 - a. Warehouse 3 -> Staging
2. Framework and execution around correct Data Capture supporting polymer volumes and lot numbers that are being moved during the Transportation route.

Tasks, routes, operational areas, and workflows may be adjusted over time by mutual agreement without the need for a new SOW, provided the machines remain in scope and operations take place at the agreed site. The Customer may at any time operate the machines manually, at their own risk.

3.2 KPIs:

Description

Technical execution: reliable route execution of workflows

Quality measurement: Data Integrity on the correct polymer lot number captured.

4. Milestones:

4.1. Hive to arrive at the South Coast Wallisville site with 2 Hive-kitted counter-balanced machines to perform Operational tasks outlined in 3.1. The Customer team will be supported by an on-site Operational Lead for the set-up & installation period; a remote supervisor for the entire Validation Period; also by their Commercial lead to organise regular (daily/weekly) check-in sessions to review progress and feedback.

4.2. After the initial 3 week period (unless extended by mutual agreement), Customer and Hive to carry out a review of the listed KPIs for Validation Period evaluation.

4.3. Following the evaluation process, in the event that KPIs are considered passed and the Customer does not wish to exercise an Opt-out, parties agree a swap date for the Hive-kitted machines over to retrofitting South Coast's machines from their existing fleet.

4.4 The Customer is free to continue uninterrupted on the rolling basis under the Original Term sheet until a time that these actions can be completed.

5. Scope of Delivery and Responsibilities

5.1 Hive's Scope of Delivery

Hive shall deliver all hardware, software, configuration, and enabling activities necessary to establish and operate the Service, including:

- Retrofitting of the Customer's machines with sensors, on-board processing units, control interfaces, and safety systems
- Installation of communication and network components directly related to machine operations
- Integration with the Hive platform
- System commissioning, testing, and validation
- One-time transport of machines to/from Hive for retrofitting
- Installation of technical equipment in the operational area required for the Service

Hive's logistics responsibility applies only to the initial rollout. Subsequent transport, machine replacement, or reinstallation is the Customer's responsibility unless otherwise agreed. All hardware and software delivered by Hive remains the property of Hive.

Hive may collect operational data generated by the Customer's use of the Hive System and Platform. Hive owns all rights to such data and may use it for service improvement and product development. Hive shall process data in a manner that does not enable identification of the Customer and shall take reasonable measures to anonymize any personal data.

5.2 Customer's Responsibilities

The Customer is responsible for all on-site activities necessary to enable remote delivery of the Service, including:

- The implementation includes all necessary equipment for autonomous operation, e.g.; hardware, installation & integration.
- The Customer is responsible for safety adaptations and overall operational safety at its facility/site, including workplace processes and human-machine interaction (with active assistance and guidance from

Hive’s safety experts), as well as network readiness and project support during the implementation period. Hive remains responsible for risk assessments related to its technology and service delivery within the agreed scope.

All activities requiring physical presence at the site remain the Customer's responsibility unless explicitly agreed otherwise.

5.3 Responsibility Allocation – Overview

Area	Hive	Customer
Retrofitting, installation, and system setup	X	
Redundant internet connection to the site		X
SIM cards and connectivity service for operations	X	
Remote operation and monitoring	X	
Machine ownership, maintenance, and daily inspections		X
Refuelling, charging, and routine maintenance		X
On-site safety measures, compliance, and safety analysis		X
System monitoring, updates, and platform	X	
Ownership and warranty of Hive hardware	X	
Risk assessments related to Hive's technology within agreed scope	X
