

Your machine-agnostic Physical AI partner.

Hive enhances the fleet you already own to make it autonomous and self-learning — a general-purpose physical AI, supervised by humans until it owns the edge cases. Everyone else automates a task; Hive runs a model.

MATERIAL FLOWS

-  Conveyor interface
-  Machine interface
-  Logistics train
-  Very high storage
-  End-of-line & storage
-  Stacking
-  High storage
-  Container load/unload

RACKING APPLICATIONS

-  Standard (to 11m)
-  Push-back
-  Cantilever
-  Drive-in
-  Double-deep
-  Mobile rack
-  Gravity
-  Block storage
-  VNA (to 12m+)
-  Shuttle (soon)

WHY HIVE

One model, every machine

A single AI across the whole fleet — not a separate integration per machine type.

Enhancement, not replacement

Sensors + lidar on machines you already own. Installed in days, fully reversible.

Human-in-the-loop by design

Supervision is the product, not the fallback. Edge cases become the next training set.

ROI from Month 1

No upfront Capex, no change management. Operation-ready within two weeks.

EXAMPLE OF A HIVE-ENHANCED MACHINE

- LIDAR
Front-mounted · distance sensing & obstacle detection
- CAMERA
Operator zone & mast · visual environment mapping
- CONTROL CABINET
Onboard Hive AI compute · edge intelligence module

OUTPUT

30%

lower labour cost
from Month 2

2×

end-to-end workflow
speed vs AMRs

50%

fewer vehicles
needed vs AMRs

90–100%

damage cases
removed

“This is a unique addition to Toyota’s product portfolio and the first technology launch of its kind in Norway. The partnership enables the automation of a wide range of truck types, both existing and new models.”

— Lars Petter Bjørgen · Director of Sales, Toyota Material Handling Norway

WHERE HIVE OPERATES — WHERE OTHERS CAN’T

- Indoor & outdoor — one machine
- Any floor — wet, glossy, uneven
- Containers — no reflectors
- Operating at height — 3× mast
- Stacking — bags, drums, totes
- Cold chain — sub-zero

Live in operation today at market-leading companies in cold chain, grocery distribution, fish farming, waste management and industrial distribution.
